Figure 1: Schematic representation of the experimental design. The diagram shows a sequence of events: 'Stimulus presentation' (a box with a question mark), 'Response' (a box with a question mark), 'Feedback' (a box with a question mark), and 'Inter-trial interval' (a box with a question mark). The sequence is repeated for multiple trials, with a 'Start' box at the beginning and an 'End' box at the end.

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 101. The *Agrobacterium* strain 101 was cultured in the YEA medium for 24 h at 28 °C. The cell concentration was adjusted to 1.0 × 10⁸ cells/ml. The cell suspension was mixed with the cell suspension of the *Agrobacterium* strain 101 at the concentration of 1.0 × 10⁸ cells/ml. The mixture was then transformed into the *Agrobacterium* strain 101. The transformation efficiency was determined by the number of transformants per 10⁸ cells. The results are shown as the mean ± SD of three independent experiments.

Figure 1 consists of eight maps arranged in a 2x4 grid. The columns are labeled 'A. balearicum', 'A. balearicum', 'A. balearicum', and 'A. balearicum'. The rows are labeled (a), (b), (c), and (d). Each map shows a coastal area with various symbols indicating the presence and abundance of the species. The maps are titled 'Species richness' and show the spatial distribution of the species across the study area.
